

10. (Amended) A device according to claim 7 wherein said pixel electrodes comprise metal material.

Sub D2
11. (Amended) An electronic device comprising:
a reflection type liquid crystal display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

C2
at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps,

wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode, and

wherein light emitted from each of the light sources is introduced into the panel from a side of said counter substrate.

12. (Amended) A device according to claim 11 wherein said pixel electrodes comprise metal material.

15. (Amended) An electronic device comprising:
a reflection type liquid crystal display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps,

wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode located on a substrate and coated with resin, and

wherein light emitted from each of the light sources is introduced into the panel from a side of said counter substrate.

19. (Amended) An electronic device comprising:
a reflection type liquid crystal display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

C4
at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps ranged in line,

wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode, and

wherein light emitted from each of the light sources is introduced into the panel from a side of said counter substrate.

20. (Amended) A device according to claim 19 wherein said pixel electrodes comprise metal material.

23. (Amended) An electronic device comprising:
a reflection type liquid crystal display panel comprising an active matrix substrate and a counter substrate, said active matrix substrate having a plurality of thin film transistors and a plurality of pixel electrodes connected with the thin film transistors; and

at least two light sources located on sides of the display panel in opposition to each other, each of light sources comprising a plurality of light emitting diode lamps,

wherein each of said light emitting diode lamps comprises a red light emitting diode, a blue light emitting diode, and a green light emitting diode,

wherein light emitted from each of the light sources is introduced into the panel from a side of said counter substrate, and

wherein said counter substrate has a plurality of inclined surfaces on an opposite side of the active matrix substrate.

24. (Amended) A device according to claim 23 wherein said pixel electrodes comprise metal material.
